How Smart is Your Toaster?

ITQ-1000-1C

Hatco's New Intelligent Toast-Qwik® allows the operator to toast multiple products at the touch of the button, changing easily from bagels to croissants to Texas toast to hash browns, as well as melting cheese and finishing smaller food products. The unit can easily take the place of the current toasting platform and add versatility and future menu expansion along with energy efficiency and cost savings.

- The conveyor can operate in four different modes:
 1. **Continuous Through Put** - like a standard conveyor toaster
 2. **Single Product Mode** - a single product can be toasted and then the conveyor stops
 3. **In and Out Mode** - the product is drawn into the chamber, pauses for a programmed amount of time, and then backs out of the chamber
 4. **In, Pause, and Continuous Through Put** - the product is drawn into the chamber, pauses for a programmed amount of time, and then continues through the chamber
- Hatco's patented ColorGuard sensing system monitors and adjusts conveyor speed and temperature during high usage periods to ensure toast color uniformity
- Using Hatco's Spot-On® technology, the toaster senses when product is placed on the conveyor and activates the unit
- The ability to hold up to eighteen product settings
- USB port located on the front allows for easy transfer of information such as program changes and product usage information

Spot-ON®
Technology
